A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 03 July 2003 has been entered.

The following is an examiner's statement of reasons for allowance:

The claims are allowed in view of the amendments of 03 July 2003 which limit the antisense sequence to one with at least 80% similarity to the exemplified sequence, or one which hybridizes to the exemplified sequence under stringent conditions and encodes a protein which phosphorylates starch or glycogen. The prior art fails to teach or suggest such a sequence or its use to transform plants to alter starch composition, and these sequences were deemed adequately described and enabled in parent application Serial No. 09/045,360 which issued as U.S. Patent 6,207,880. The submission of Ritte et al, which corroborates the function of the encoded protein stated in the specification, further contributes to the adequate written description of the claimed genus.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
